LIFE SAFETY MADE SIMPLE WITH COMMERCIAL EXTINGUISHERS

DESIGN

SIMPLE LIFE SAFETY IS EFFECTIVE LIFE SAFETY

Keystone sells commercial grade fire extinguishers that compliment your life safety systems. They not only function to extinguish small fires, but they also serve a vital role in helping you safely egress from a burning building.

Keystone offers *inspection, testing, service, and recharging* of all classes and sizes of fire extinguisher. Had a fire? We can recharge most extinguishers right at your facility! We also offer *fire extinguisher training*, both in the classroom and with a live burn, so you and your employees know how to properly use an extinguisher in case of emergency.

INSTALL

COMPLETE FIRE PROTECTION

Protecting People & Property for more than 60 Years

Stored Pressure

Stored pressure fire extinguishers are the most common type and can be easily recognized because of the presence of a pressure gauge located on the valve.

Self Expelling

Self-expelling extinguishers are more commonly known as CO2 fire extinguishers, so named because the agent acts as its own source of pressure in the cylinder.

Cartridge Operated

This type of fire extinguisher contains the propellant – typically CO2 or nitrogen – in a separate cartridge that is punctured just prior to operation, which discharges the extinguishing agent.

Wheeled

Wheeled fire extinguishers are large capacity fire extinguishers. They come in one of two configurations – stored pressure or cartridge operated. Wheeled units are most commonly found at airports, helipads, parking facilities, and construction sites where more agent capacity is necessary.
