CONTROL FIRE & LIMIT DAMAGE

Keystone is the leading fire sprinkler system provider in the greater Philadelphia, Pennsylvania region. We will design and install your commercial fire sprinkler system using the best products from the sprinkler industry's leading manufacturers, like Viking, Reliable, Vitaulic, Aurora, and Ames.

SPRINKLER SYSTEMS & COMPONENTS

Protecting People & Property for more than 60 Years

Wet Sprinkler

Wet pipe systems are by far the most common and most cost-effective of the four fire sprinkler technologies.

Dry Sprinkler

Dry sprinkler system piping does not contain any water and is charged with pressurized gas.

Pre-Action Sprinkler

Pre-action systems are specialized for use in locations where accidental activation could damage high value physical assets. Similar to a dry-pipe system, a pre-action sprinkler system uses piping charged with gas.

Deluge Systems

A deluge system holds back water via an electrically operated valve, which when opened, releases copious amounts of water.

Foam Systems

Flammable liquid fires cannot be contained with water alone. Foam mixed with water, blankets the liquid that is on fire, eliminating the oxygen supply and extinguishing it.

Fire Pump

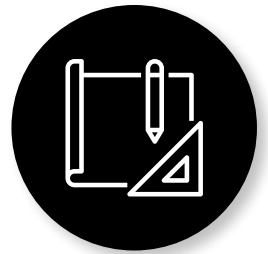

An automatic fire pump provides additional water pressure and volume.

Standpipes

Vertical piping designed for use by fire departments to extend their ability to fight fires within multi-story buildings.

Backflows

Backflow prevention assemblies (BFPs) inhibit the reverse flow of brackish sprinkler water that could contaminate the drinking water supply.
